FLUORIDATION'S DESTINY OF DECEIT

By Glen S.R. Walker

Without challenge within the Parliaments of Australia since the 1960's, your political representatives have voted unanimously, year after year, to force compulsory fluoridation into every home and all without scientific proof of its effectiveness and safety for humans.

There are books of rule called Constitutions which govern the Government, BUT are ignored in favour of forcing all citizens of Australia to daily drink fluoride waste by-products of the fertiliser factories.

These fluoride chemicals are not registered or licensed anywhere in the world as safe for humans, including Australia!

Nothing in the world has ever been protected in such a manner that encompasses all the establishment disciplines of the community from Heads of State (Prime Ministers) down through every section of State and Local Government, all of whom foster, not the matter in question but its relative importance of keeping within "The Establishment". It's called Democracy!

Fluoride identified as a carcinogen

Scientific-medical books have been published showing the danger of fluoride added to drinking water supplies, Government animal studies prove this danger and universities publish research that identifies fluoride as a carcinogen.

The enormous scientific data against fluoridation draws serious attention to a most important question.

No standard test in Australian hospitals for fluoride concentration in human blood.

Why is fluoride in human blood the "excepted" poison, NOT a standard regular blood test in Australian hospitals, and indeed it is near impossible to get such a blood test for fluoride in Australia! As a cumulative poison, fluoride increases accordingly and is only partly excreted

throughout life!

Medical "science" (?) is an important adjunct of the fluoride failed concept that must be covered over in so many ways.

Some of the greatest books ever published on the subject of fluoridation are the "Hansard Reports" of the introduction of compulsory fluoridation plants in every State and Territory Governments of Australia.

W.H.O. Definition includes fluoridation as a drug

As a medical-pharmaceutical daily drug concept, fluoridation contradicts all medical principles because there is no control on the dose of fluoride per person irrespective of the enormous variables involved in every person daily drinking this particular fluoride drug.

The World Health Organization describes a drug as:

"Any substance used to alter or influence a physiological system for the benefit of the recipient." That is fluoridation.

We are really back to the 1960's fluoridation explosion that ignored published data.

Controlled Study showed excellent teeth without fluoridation

The first and only properly controlled study in Australia on children's teeth was at the Hopewood Home in Bowral, New South Wales, and documented in Leslie Owen Bailey's book, "A Gift of Love".

The Hopewood Home data was studied by the Australian Medical Association and reported by them 20th February, 1960 that:

"Hopewood children continued to show 'remarkable freedom from dental caries.'"

The lesson was lost on the AMA and ADA because the Hopewood children did not ingest fluoridation or fluoride supplements.

In Melbourne University, 24th June, 1981, a lecture was given by the Professor of Child Dental Health, Professor E. Storey, the title, "Teeth in the Land of Milk and Honey".

Professor Storey showed slides that illustrated the diet of children from Hopewood Home, Bowral, N.S.W.

An important notation in the AMA Journal, 20th June, 1953, stated that on the Hopewood study:

"We wish to acknowledge the assistance given by the National Health and Medical Research Council of Australia (NHMRC)."

Although armed with this original research into children's teeth, carefully checked by the AMA, the NHMRC at the same time proceeded with the promotion of fluoridation! (**Fluoridation Poison on Tap**, p. 303).

The promotion and indeed strong endorsement by the NHMRC was all without any published or indeed performed study of fluoridation on humans!

Failure of the Fluoridation Experiment

In 2006 The Fluoridation Bomb exploded throughout Australian media but was completely SOUNDLESS in the Dental, Medical and Scientific arena, also the word Fluoridation missing as though it had nothing to answer, and our politicians and their Party so quiet on the reason that fluoridation has failed.

So the scientific foundation of fluoridation is based on a faulty and poor base that must eventually crumble,

SUNDAY AGE 1 October 2006

"State of decay — our teeth worst in developed world"

particularly as the experiment has clearly failed after 40 years of **experimenting on** the Australian people.

"DENTAL CRISIS LOOMS"

"Treatment waiting time 'a disgrace'"

Fluoride Science á la Dentistry & Company Pty Ltd

By Glen S.R. Walker

From the beginning, fluoridation has been the greatest con job of politics and medicine.

The caution yellow light shone brightly and continuously, especially at the U.S. Annual Conference of State Dental Directors in the Federal Security Building, Washington, **on 6th June, 1951.**

Here was a gathering of the U.S. Dental Hierarchy all excited to hear about fluoridation from Dr. Frank Bull who opened his talk by asking, "What are we waiting for? Why don't we go ahead and fluoridate drinking water supplies?"

This has been the U.S. "Ethical Standard of Medicine relating to fluoridation" ever since that date, 1951.

One may ask what medical Ethics could this meeting possibly denounce? The simple answer, so simple, so honest, it really labels the U.S. medical recklessness of those present at that meeting, sponsoring and endorsing fluoridation before the U.S. Government had finished THE FIRST EVER OFFICIAL FLUORIDATION EXPERIMENT IN THE WORLD at Grand Rapids.

That Government Artificial Fluoridation Experiment on the people of Grand Rapids was a so-called medical-dental programmed scientific experiment of **10 year duration starting in 1945** (same year as the Nuremberg trials).

So the cream of the Dental Scientists were meeting to promote artificial fluoridation before the "first ever" experimental study was completed. Indeed it had a further 6 years duration, meaning the Experiment was not even

half-way through its legal scientific course.

We now come to a situation of possibly the greatest disgrace and false health directive ever facing the Medical Ethics of any country of the world; Ethics meaning Honesty and the Christian Principles governing true Democracy and the right of the people, a policy that was founded in the Nuremberg Court that judged German Nazi generals responsible for "Experimenting on Humans", and some were hanged.

Medical Recklessness - sponsoring and endorsing fluoridation before the first official fluoridation experiment in the world.

It was founded in the Nuremberg Court 1945 ruling that experimenting on humans was illegal and agreed by all countries that the Court's declaration be accepted:

"(1) The **voluntary consent** of the human subject is **absolutely essential.**" (CODE6: Nuremberg Court)

The date of the Nuremberg Court 1945 is important relative to fluoridation - German Experimenters on Humans were hanged!

The Nuremberg Code stands cast in stone, signed and acceptance by most countries, especially the U.S.A. and Australia.

The U.S.A. rejoiced in this final action of World War II and the troops returning home from the hideous war, fought at such expense, all to stop a despotic enemy over-ruling the democratic freedom and rights of the American people.

The year was 1945, "The year of victory", a war fought to protect the great Christian Principles of the American People, their Constitution and Bill of Rights.

Celebrations were shared throughout the U.S.A., churches were full to overflowing in services of Thanksgiving.

The U.S.A. was again a Country of Freedom, bought at a colossal cost, never able to quantify the price of Freedom.

A medical experiment without approval of the people

Virtually at the same time, 1945, as these U.S. celebrations of Freedom continued, but the U.S. Government started:

Government started:

A medical experiment on the U.S. people of Grand Rapids by introducing a poisonous fluoride chemical into the drinking water supplies of each home. This was done without the approval of the people subjected to this medical-dental Experiment, a process (artificial fluoridation) never before used in the world!

Politically inspired excuses have been made to cover this Human Experiment, even the old wild west legal jargon, "We didn't know the gun was loaded!"

Dangers of fluoridation known before experiment on people commenced

But "they" did know the gun was well and truly loaded by statements by the American Dental Association in their Journal 1944:

"We do know the use of drinking water containing as little as 1.2 to 3.0 parts per million of fluorine will cause such developmental disturbances in bones as osteosclerosis, spondylosis and osteoporosis, as well as goiter, and we cannot afford to run the risk of producing such serious systemic disturbances in applying what is at present a doubtful procedure intended to prevent development of dental disfigurements among children."

The American Medical Association Journal 1943 in an editorial stated:

"Distribution of the element fluorine is so widespread throughout nature that a small intake of the element is practically unavoidable. Fluorides are general protoplasmic poisons, probably because of their capacity to modify the metabolism of cells by changing the permeability of the cell membrane by inhibiting certain enzyme systems. The exact mechanism of such actions is obscure. The sources of fluorine intoxication are drinking water containing 1 part per million or more of fluorine."

Fluoridation of Grand Rapids was an assault, not only on the people of Grand Rapids, but on "Known Fluoridation Science", by the powers, seen and unseen, but more defensible than the Nazi Generals in the Nuremberg Court who were on a baseless proposition of protection.

Books and articles have been written on the subject of the U.S. introduction of adding a well known fluoride poison and pumping it into every home, that has not only any alternative, but no redress, or hope of reparation against any Government which commences artificial fluoridation.

Fluoridation is the GOD of fluoridated countries which must not be challenged.

The Fluoridation Code has its think tank to devise methods of protection for the governments and their cohorts, all to protect scientific criticism or questions on the reality of fluoridation claims.

Perhaps the greatest propaganda ever in the world are particular slogans, called fluoridation science or dental gobbledegook.

In High Courts of Law, official medical-dental books and data on fluoridation the following "scientific" direction is repeated ad nauseum relative to "the safety of fluoridation", and accepted without question in the very direction it should be challenged.

"The burden of proof is the responsibility of the Anti-Fluoridation Movement!"

A perfect Goebbels Theory but absolutely conflicting with the Law of the U.S.A. and Australia, which has a supposed safety mechanism where all chemicals, medicines and drugs used on humans, must be investigated, researched and critical scientific studies carried out to prove their safety to man, with this data recorded in the U.S. Food and Drug Administration, before human use is permitted. THAT IS LAW

Goebbels principles used to promote artificial fluoridation.

The War was over but the words and principles of Nazi General Joseph Goebbels, Director of German Propaganda remained as an instrument for promoting fluoridation.

Goebbels' theory was that if a lie is repeated over and over again, "long enough and loud" it will become a FACT on which fluoridation has been promoted over the past 60 years.

Check their propaganda messages, you will find the same claims made, "over and over again" without scientific substantive evidence of support.

Principles such as "Tell the Truth and Nothing but the Truth" swamped with unscientific professional sponsorship.

How is it possible for such statements, of burden of proof being the responsibility of the user and be subjected within the halls of justice, parliaments, medical associations, dental associations and even the Press, plus the Australian National Health and Medical Research Council (NHMRC)?

Perhaps if we go back to the end of WWII and the rejoicing and celebrating in churches all over the U.S.A.

The sermons were based on the victor over the evil totalitarian Nazi kind of Government and "Victory for Democracy" which was taught in U.S. Schools to mean:

"Government by the People for the People"

However, at those sacred times of sacrifice and celebrations the wheels of Democracy had fallen off never to be re-installed.

The fluoridation of the new **1945 Democracy** in its scheming pseudo-commercial science became the new "State of the Art in Science", discarding such principles as "hands over hearts" and "Tell the Truth and Nothing But the Truth", because taking that public oath interfered with commercialism and the mighty fluoridation dollar.

Microscopes are not permitted viewing fluoridation data and its history, stored out of reach of inquiring minds and its original scientific existence, with over 60 years of unscientific professional sponsorship swamped with important questions never answered.

Conclusion

For many years we have explained the science of fluoridation by its promoters is based on unsubstantiated "Dental Slogans".

The history of that evil General Goebbels reveals he spelt out clearly that - "Nothing Kills Critical Thinking Faster Than Slogans".

Bottle Water Application to add a Fluoride Chemical to all clean bottled spring water!

Application A588 to Food Standards Australia New Zealand

There surely must be a mistake or is it just the usual ploy to label everything to draw attention to this failed medical concept.

There must be a mistake, or is the public so dumb they represent hoax blotting paper, and suck up anything presented about fluoridation and fluoride chemicals.

Common sense, logic, is the missing factor.

Why would a person go to a supermarket to buy a bottle of good clean unadulterated water that has fluoride added?

Bottle water costs about \$1 per litre and when these cowboys add fluoride that cost will rise accordingly.

Then comes the factor of common sense and logic.

The customer can just go to any water tap in their home, in their streets and fill up bottles of fluoridated water straight from the town water supply.

The costs are:

Bottle water plus fluoride - \$1 per litre plus

Town fluoridated water - 0.01 cents per litre (one hundredth of a cent). That is one tenthousandths of the cost!

The error in judgement draws attention, once again, to question the agenda behind such a scientific rort asking anyone to buy, at exorbitant cost, the equivalent of fluoridated tap water in appropriately presented bottles that would become "Bottled Medicine", with no scientific evidence of safety.

We seem to have passed beyond the sad identification of the past, the Australian Banana Republic (a la Keating). and now have reached the extremity of scientific rort and like the Burial of Sir John Moore "not a drum was heard" (Charles Wolfe) and the media closed down.

Brickworks charged with Fluoride Pollution

Western Australia's largest brick manufacturer, Midland Brick, was due to appear in Midland Magistrate's Court in January after an investigation by the Environmental Enforcement Unit found the State's biggest brick manufacturer had allegedly been in breach of Section 58(1) of the Environmental Protection Act from 13 March 2005 to 18 July 2006.

The charge relates to Midland Brick's alleged failure to monitor - and report the results from - two of three ambient monitors around its Swan Valley brickworks, which measure ground-level concentrations of hydrogen fluoride.

The charge carries a maximum penalty of \$125,000.

Midland Brick general manager Peter Hogan said yesterday he was not aware of the charge until told about it by *The West Australian*.

"If it's about the ambient monitoring, there's a whole lot of stuff behind all that," he said. "We believe it's not our fault and somebody else's, so we'll be defending it."

The investigation which ultimately led to Midland Brick being charged came about after Mr Buckeridge's BGC hired Andrew Baker, the former director of pollution control with the Department of Environment and Conservation, to carry out an independent review of emission levels in the Swan Valley.

Mr Baker's findings also led to the department amending Midland Brick's licence after it was discovered that a 2004 amendment by then environment minister Judy Edwards had produced the unintended effect of allowing fluoride emissions to increase five-fold.

WEST AUSTRALIAN 2 OCTOBER, 2006

One in Six Children Brain Damaged by Industrial Pollution

Millions of children - "One in six children" throughout the world may have suffered brain damage as a result of industrial pollution.

Published in the leading medical journal "The Lancet" a study by scientists Philippe Grandjean, from the University of Southern Denmark in Winslowparken and his co-author, Philip Landrigan, from the Mount Sinai School of Medicine in New York conclude: "The combined evidence suggests that neurodevelopmental disorders caused by industrial chemicals has created a silent pandemic in modern society."

The Lancet article stated, "Potential effects of exposure to even tiny amounts of toxic chemicals include lower IQ scores and conditions such as autism, attention deficit disorder, and cerebral palsy."

The American and Danish researchers say that "lead, methylmercury, arsenic and solvents such as ethanol and toluene are among 202 industrial and agricultural chemicals with potential to damage the brain. **Other substances that could prove to be toxic in excessive amounts include fluoride, a common additive in drinking water and toothpaste.**"

Only 6% of drug advertising material is supported by evidence

"A new study of the advertising material and marketing brochures sent out by drug companies to GPs in Germany has shown that about 94% of the information in them has no basis in scientific evidence."

"The study, carried out by the Institute for Evidence-Based Medicine, a private independent research institute in Cologne, evaluated 175 brochures containing information on 520 drugs, which were either sent by post or handed out to GPs since last June."

The study was published in the drugs bulletin *Arznei Telegramm* (Thomas Kaiser and Peter Sawicki, February 2004; 35:21-3); and reported in the *British Medical Journal*, February 28, 2004, p. 485.
