## The Authentic Original History of Fluoridation

by Glen S.R. Walker ©

Chairman, Freedom from Fluoridation Federation of Australia.

The reality and actual beginning of water fluoridation illustrating its claimed science was in fact, "a case for useful evidence in U.S. Court litigation", a political feat to cover the known dangers of fluorides to humans and declare fluoride chemicals safe.

This action had no scientific foundation or any supportive medical science relative to children's teeth, it was just a typical Government inept and dishonest action to protect toxic fluoride chemical manufacturers instead of "the protection of the people" subjected to fluoride pollution from the Manhattan Project, the building of the first Atomic Bomb in 1944.

The cover-up of fluoride human damage during the Atomic Bomb production is "today's scientific base" of protection of fluoride chemicals emitted by industries, large, very large and small in many forms and concentrations across the world, where fluorides are not only used in production processes, but also exhausted into the atmosphere as toxic waste by-products.

The silent approval of fluoridation by governments and their disregard for the damage caused to the health of the people caused by fluoride pollution from such huge industries, is related to an equivalent ratio of immense

taxation income, which impresses governments, and seems to override all common logic and even commonsense, all protected because of our Laws of "no accountability" in our "democratic" legislation.

Governments' paramount importance to industrial income (taxes) arrives at immense cost to communities (humans) all of which amounts to short-term, cashed-up budgets before retirements of politicians and Governments that take such tax which in reality is an insurance policy for fluorides and fluoridation.

The powers behind the protection of fluoride polluting industries is beyond the comprehension of most people and must not be made public.

Consider if the truth about the severe health impact of industrial toxic fluoride exhausts was widely known and it became Law to reduce emissions to "Zero", the world production of almost every metal smelter would stop.

Just imagine no aluminium available, no superphosphate fertilizer, all aircraft exhausts cancelled; even cars that depends on oil refineries using fluoride in their petrol process that finishes out in the environment; the multi-billion dollars industry in drugs, good and bad stopped; and space vehicles grounded. But there would be advantages to humans; no more fluoride in toothpaste; no more fluoride polluted drinking water supplies and fluoride based drugs removed.

This therefore answers where the real forces are behind the widespread use of fluorides.

Infinite reality that becomes finite deception by Parliaments propagated by the world's largest industries, all protecting fluorides and fluoridation.

The actual beginning of fluoridation in the USA, 1944 is as false today with propaganda that has deep-seated, questionable, serious complications relative to honesty, the health of the people and actions by those in privileged positions of trust.

Australia is a nation of people who just "do not care", or

### About the author:

*Glen S.R. Walker is the former proprietor of a chemical laboratory with Australia's highest qualification - National Association of Testing Laboratories qualification. He and his staff pioneered the determination of trace impurities in electrolytes using the Atomic Absorption Spectrophotometer, invented by the C.S.I.R.O. and now used universally throughout the world. With over 40 years experience with fluorides, when the chemical was first used in electrochemical formulations, he is very aware of the hazards and dangers in using fluoride chemicals. He is the editor of The Australian Fluoridation News and author of Fluoridation - Poison on Tap, as well as technical papers for Australian and overseas journals. He was the first Australian to be made a Fellow of the Institute of Metal Finishing, London, awarded for his work in that field, and is Emeritus Member (60 years) Electro Chemical Society, USA.*

perhaps “do not dare” and afraid to make even one small step across the “establishment line” into an environment of truth and democracy.

Do people care?

*The Australian Fluoridation News*, Vol. 33, No. 7, 1997, published the original first account of the start of white-

washing the dangers of fluoride and the fluoridation hoax. Key extracts of that account are published below.

The details were revealed by Archive Research into U.S. Government WW2 documents by Griffith and Bryson, including “declassified” papers from the Manhattan Project, the U.S. military group that built the first atomic bomb.

# *The Australian Fluoridation News*

## *Special Edition 1997*

### *“Fluoride, Teeth and the Atomic Bomb”* ©

- Much of the original proof that fluoride is “safe” for humans in low doses was generated by A-bomb program scientists, who had been secretly ordered to provide **“evidence useful in litigation”** against defence contractors for fluoride injury to citizens. The first lawsuits against the U.S. A-bomb program were not over radiation, but over fluoride damage, the documents reveal.
- Human studies were required. Bomb program researchers played a leading role in the design and implementation of the most extensive U.S. study of the health effects of fluoridating public drinking water - conducted in Newburgh, New York from 1945 to 1956. Then, in a classified operation code-named “Program F,” they secretly gathered and analysed blood and tissue samples from Newburgh citizens, with the cooperation of State health Department personnel.

**Fluoride was the key chemical in atomic bomb production, according to the documents. Massive quantities of fluoride were essential for the manufacture of bomb-grade uranium and plutonium for nuclear weapons throughout the Cold War. One of the most toxic chemicals known, the documents reveal that fluoride rapidly emerged as the leading chemical health hazard of the U.S. atomic bomb program - both for workers and for nearby communities.**

- The original “secret” version - obtained by these reporters - of a 1948 study published by Program F scientists in the *Journal of the American Dental Association* shows that evidence of the adverse health effects from fluoride was censored by the U.S. Atomic Energy Commission (AEC) - considered the most powerful of Cold War agencies - **for reasons of national security.**
- The bomb program’s fluoride safety studies were conducted at the University of Rochester, site of one of the most notorious human radiation experiments of the Cold War, in which unsuspecting hospital patients were injected

with toxic doses of radioactive plutonium. The fluoride studies were conducted with the same ethical mind-set, in which “national security” was paramount.

#### **Conflict of Interest - U.S. Government**

**The U.S. government’s conflict of interest - and its motive to prove fluoride “safe” - has not until now been made clear to the general public in the furious debate over water fluoridation since the 1950s, nor to civilian researchers and health professionals, or journalists.**

The declassified documents resonate with a growing body of scientific evidence, and a chorus of questions, about the health effects of fluoride in the environment.

Human exposure to fluoride has mushroomed since World War II, due not only to fluoridated water and toothpaste, but to environmental pollution by major industries from aluminium to pesticides: **Fluoride is a critical industrial chemical.**

The impact can be seen, literally, in the smiles of our children. Large numbers of U.S. young people - up to 80 percent in some cities - now have dental fluorosis, the first visible sign of excessive fluoride exposure, according to the U.S. National Research Council. (The signs are whitish flecks or spots, particularly on the front teeth, or dark spots or stripes in more severe cases.)

The declassified documents add urgency: **Much of the original proof that low-dose fluoride is safe for children’s bones came from U.S. bomb program scientists, according to this investigation.**

**Now, researchers who have reviewed these declassified documents fear that Cold War national security considerations may have prevented objective scientific evaluation of vital public health questions concerning fluoride.**

---

**“... how could I be told by NIH that fluoride has no central nervous system effects when these documents were sitting there all the time?”**

**Dr. Phyllis Mullenix**  
(Former head of toxicology, Forsyth Dental Center, Boston)

---

**“Information was buried,”** concludes Dr. Phyllis Mullenix, former head of toxicology at Forsyth Dental Center in Boston, and now a critic of fluoridation. **Animal studies Mullenix and co-workers conducted at Forsyth in the early 1990’s indicated that fluoride was a powerful central nervous system (CNS) toxin, and might adversely affect human brain functioning, even at low doses.** (New epidemiological evidence from China adds support, showing

#### **About the authors:**

*Joel Griffiths is a medical writer who lives in New York. Author of a book on human radiation experiments cited in Congressional Hearings and used as a basic reference in environmental publications, Mr Griffiths has also contributed hundreds of articles for Medical Tribune, as well as numerous articles for Parents’ Magazine, the Village Voice, Manhattan Tribune, Covert Action, etc.*

*Chris Bryson, who holds a Masters degree in Journalism, is an independent reporter with ten years’ professional experience. He has worked with BBC Radio and Public Television in New York, plus numerous publications.*

Archival Research: **Clifford Honnicker.**

a correlation between low-dose fluoride exposure and diminished I.Q. in children.) Mullenix's results were published in 1995, in a reputable peer-reviewed scientific journal.

During her investigation, Mullenix was astonished to discover there had been virtually no previous U.S. studies of fluoride's effects on the human brain. Then, her application for a grant to continue her CNS research was turned down by the U.S. National Institutes of Health (NIH), where an NIH panel, she says, flatly told her that "fluoride does not have central nervous system effects."

Declassified documents of the U.S. atomic-bomb program indicate otherwise. An April 29, 1944 Manhattan Project memo reports:

*"Clinical evidence suggests that uranium hexafluoride may have a rather marked central nervous system effect ... It seems most likely that the F [code for fluoride] component rather than the T [code for uranium] is the causative factor."*

The memo - stamped "secret" - is addressed to the head of the Manhattan Project's Medical Section, Col. Stafford Warren. Colonel Warren is asked to approve a program of animal research on CNS effects:

*"Since work with these compounds is essential, it will be necessary to know in advance what mental effects may occur after exposure ... This is important not only to protect a given individual, but also to prevent a confused workman from injuring others by improperly performing his duties."*

On the same day Colonel Warren approved the CNS research program. This was in 1944, at the height of the Second World War and the nation's race to build the world's first atomic bomb. For research on fluoride's CNS effects to be approved at such a momentous time, the supporting evidence set forth in the proposal forwarded along with the memo, must have been persuasive.

---

***"Clinical evidence suggests that uranium hexafluoride may have a rather marked central nervous system effect ..."***

Manhattan Project Memo, April 29, 1944.

The proposal, however, is missing from the files of the U.S. National Archives. "If you find the memos, but the document they refer to is missing, it's probably still classified," said Charles Reeves, chief librarian at the Atlanta branch of the U.S. National Archives and Records Administration, where the memos were found. Similarly, no results of the Manhattan Project's fluoride CNS research could be found in the files.

**After reviewing the memos, Mullenix declared herself "flabbergasted". She went on, "how could I be told by NIH that fluoride has no central nervous system effects when these documents were sitting there all the time?" She reasons that the Manhattan Project did do fluoride CNS studies - "that kind of warning, that fluoride workers might be a danger to the bomb program by improperly performing their duties - I can't imagine that would be ignored" - but that the results were buried because they might create a difficult legal and public relations problem for the government.**

The author of the 1944 CNS research proposal was **Dr Harold C. Hodge**, at the time chief of fluoride toxicology studies for the **University of Rochester** division of the Manhattan Project. Nearly fifty years later at the Forsyth Dental Center in Boston, Dr Mullenix was introduced to a gently ambling elderly man brought in to serve as a consultant on her CNS research - **Harold C. Hodge**. By then Hodge had

achieved status emeritus as a world authority on fluoride safety.

"But even though he was supposed to be helping me," says Mullenix, "he never once mentioned the CNS work he had done for the Manhattan Project."

The "black hole" in fluoride CNS research since the days of the Manhattan Project is unacceptable to Mullenix, who refuses to abandon the issue. **"There is so much fluoride exposure now, and we simply do not know what it is doing," she says. "You can't just walk away from this."**

Dr Antonio Noronha, a NIH scientific review advisor familiar with Dr Mullenix's grant request, says her proposal was rejected by a scientific peer-review group. He terms her claim of institutional bias against fluoride CNS research "farfetched" he adds, "We strive very hard at NIH to make sure politics does not enter the picture."

## **Split Atom and Split Peaches.**

**A massive Manhattan Project pollution incident in New Jersey sparks secret wartime U.S. research on fluoride safety.**

The documentary trail begins at the height of WW2, in 1944, when a severe pollution incident occurred downwind of the E.I. du Pont de Nemours Company chemical factory in Deepwater, New Jersey. The factory was then producing millions of pounds of fluoride for the Manhattan Project, the ultra-secret U.S. military program then racing to produce the world's first atomic bomb.

---

***Their crops were blighted, "something is burning up the peach crops around here."***

Farmers downwind of E.I. du Pont de Nemours Company chemical factory, Deepwater New Jersey.

The farms downwind in Gloucester and Salem counties were famous for their high quality produce - their peaches went directly to the Waldorf Astoria Hotel in New York. Their tomatoes were bought up by Campbell's Soup.

But in the summer of 1943, the farmers began to report that their crops were blighted, and that "something is burning up the peach crops around here."

**Poultry died after an all night thunderstorm, they reported. Farm workers who ate the produce they had picked sometimes vomited all night and into the next day. "I remember our horses looked sick and were too stiff to work," these reporters were told by Mildred Giordano, who was a teenager at the time. Some cows were so crippled that they could not stand up, and grazed by crawling on their bellies.**

The account was confirmed in taped interviews, shortly before he died, with Philip Sadler of Sadler Laboratories of Philadelphia, one of the nation's oldest chemical consulting firms. Sadler had personally conducted the initial investigation of the damage.

The attention of the Manhattan Project and the federal government was rivetted on the New Jersey incident - although the farmers did not know it - according to once secret documents obtained by these reporters. After the war's end, in a secret Manhattan Project memo, dated March 1, 1946, the Manhattan Project's chief of fluoride toxicology studies, **Harold C. Hodge**, worriedly wrote to his boss Colonel Stafford L. Warren, Chief of the Medical Division, about "problems associated with the question of fluoride contamination of the atmosphere in a certain section of New Jersey.

**There seem to be four distinct (though related) problems," continued Hodge;**

- "1. A question of injury of the peach crop in 1944.
- "2. A report of extraordinary fluoride content of vegetables grown in this area.
- "3. A report of abnormally high fluoride content in the blood of human individuals residing in this area.
- "4. A report raising the question of serious poisoning of horses and cattle in this area."

### Law suits for Fluoride Damage

The New Jersey farmers waited until the war was over, then sued du Pont and the Manhattan Project for fluoride damage - reportedly the first law suits against the U.S. A-bomb program.

Although seeming trivial, the lawsuits shook the government, the secret documents reveal. Under the personal direction of Manhattan Project Chief Major General Leslie R. Groves, secret meetings were convened in Washington, with compulsory attendance by scores of scientists and officials from the U.S. War Department, the Manhattan Project, the Food and Drug Administration, the Agriculture and Justice Departments, the U.S. Army's Chemical Warfare Service and Edgewood Arsenal, the Bureau of Standards, and du Pont lawyers. Declassified memos of the meetings reveal a secret mobilization of the full forces of the government to defeat the New Jersey farmers.

---

***"If the farmers won, it would open the door to further suits, which might impede the bomb program's ability to use fluoride."***

Jacqueline Littvbell, Tennessee public interest lawyer specialising in nuclear uses

---

These agencies *"are making scientific investigations to obtain evidence which may be used to protect the interest of the Government at the trial of the suits brought by owners of peach orchards in ... New Jersey,"* stated Manhattan Project Lieutenant Colonel Cooper B. Rhodes, in a memo c.c.'d to General Groves.

"27 August 1945

***"Subject:*** Investigation of Crop Damage at Lower Penns Neck, New Jersey

***To:*** The Commanding General, Army Service Forces, Pentagon Building, Washington D.C.

***"At the request of the Secretary of War the Department of Agriculture has agreed to cooperate in investigating complaints of crop damage attributed ... to fumes from a plant operated in connection with the Manhattan Project."***

Signed L.R. Groves, Major General U.S.A.

"The Department of Justice is cooperating in the defense of these suits," wrote General Groves in a Feb 28th 1946 memo to the Chairman of the Senate Special Committee on Atomic Energy.

Why the national-security emergency over a few lawsuits by New Jersey farmers? In 1946 the United States had begun full-scale production of atomic bombs. No other nation had yet tested a nuclear weapon, and the A-bomb was seen as crucial for U.S. leadership of the post-war world. The New Jersey fluoride lawsuits were a serious roadblock to that strategy.

"The specter of endless lawsuits haunted the military," writes Lansing Lamont in his acclaimed book about the first atomic bomb test, "Day of Trinity".

In the case of fluoride, **"If the farmers won, it would**

**open the door to further suits, which might impede the bomb program's ability to use fluoride,"** said Jacqueline Kittrell, a Tennessee public interest lawyer specializing in nuclear cases, who examined the declassified fluoride documents. (Kittrell has represented plaintiffs in several human radiation experiment cases.) She added, **"The reports of human injury were especially threatening, because of the potential for enormous settlements - not to mention the PR problem."**

Indeed, du Pont was particularly concerned about the "possible psychologic reaction" to the New Jersey pollution incident, according to a secret 1946 Manhattan Project memo. Facing a threat from the Food and Drug Administration (FDA) to embargo the region's produce because of "high fluoride content," du Pont dispatched its lawyers to the FDA offices in Washington, where an agitated meeting ensued. According to a memo sent next day to General Groves, Du Pont's lawyer argued "that in view of the pending suits ... any action by the Food and Drug Administration ... would have a serious effect on the du Pont Company and would create a bad public relations situation." After the meeting adjourned, Manhattan Project Captain John Davies approached the FDA's Food Division chief and "impressed upon Dr. White the substantial interest which the Government had in claims which might arise as a result of action which might be taken by the Food and Drug Administration."

There was no embargo. Instead, new tests for fluoride in the New Jersey area would be conducted - not by the Department of Agriculture - but by the Chemical Warfare Service (CWS) because "work done by the Chemical Warfare Service would carry the greatest weight as evidence if ... lawsuits are started by the complainants." The memo was signed by General Groves.

---

***"Would there be any use in making attempts to counteract the local fears of fluoride ... through lectures on F toxicity and perhaps the usefulness of F in tooth health?"***

Harold C. Hodge,  
Chief fluoride toxicologist

---

Meanwhile, the public relations problem remained unresolved - local citizens were in a panic about fluoride.

The farmer's spokesman, Willard B. Kille, was personally invited to dine with General Groves - then known as "the man who built the atomic bomb" - at his office at the War Department on March 26, 1946. Although he had been diagnosed with fluoride poisoning by his doctor, Kille departed the luncheon convinced of the government's good faith. The next day he wrote to the general, wishing the other farmers could have been present, he said, so "they too could come away with the feeling that their interests in this particular matter were being safeguarded by men of the very highest type whose integrity they could not question.

### THE BEGINNING OF THE FLUORIDATION DECEPTION

#### Fluoride Toxicity and Tooth Decay - the Link

In a subsequent secret government memo, a broader solution to the public relations problem was suggested by chief fluoride toxicologist Harold C. Hodge. He wrote to the Medical Section chief, Col. Warren: **"Would there be any use in making attempts to counteract the local fear of**

**fluoride on the part of residents of Salem and Gloucester counties through lectures on F toxicology and perhaps the usefulness of F in tooth health?"** Such lectures were indeed given, not only to New Jersey citizens, but to the rest of the nation throughout the Cold War.

### **The Fluoridation Road Show had commenced!**

The New Jersey farmers' lawsuits were ultimately stymied by the government's refusal to reveal the key piece of information that would have settled the case - how much fluoride du Pont had vented into the atmosphere during the war. *"Disclosure ... would be injurious to the military security of the United States,"* wrote Manhattan Project Major C.A. Taney, Jr. The farmers were pacified with token financial settlements, according to interviews with descendants still living in the area. "All we knew is that du Pont released some chemical that burned up all the peach trees around here," recalls Angelo Giordano, whose father James was one of the original plaintiffs. "The trees were no good after that, so we had to give up on the peaches."

**Their horses and cows, too, acted stiff and walked stiff, recalls his sister Mildred. "Could any of that have been the fluoride?" she asked. (The symptoms described are cardinal signs of fluoride toxicity, according to veterinary toxicologists.) The Giordano family, too, has been plagued by bone and joint problems, Mildred adds. Recalling the settlement received by the Giordano family, Angelo told the reporters that "my father said he got about \$200."**

The farmers were stonewalled in their search for information about fluoride's effects on their health, and their complaints have long since been forgotten. But they unknowingly left their imprint on history - their complaints of injury to their health reverberated through the corridors of power in Washington, and triggered intensive secret bomb-program research on the health effects of fluoride. A secret 1945 memo from Manhattan Project Lt. Col. Rhodes, to General Groves stated: "Because of complaints that animals and humans have been injured by hydrogen fluoride fumes in [the New Jersey] area, although there are no pending suits involving such claims, the **University of Rochester** is conducting experiments to determine the toxic effect of fluoride."

---

***"Because of complaints that animals and humans have been injured by hydrogen fluoride fumes ... the University of Rochester is conducting experiments to determine the toxic effect of fluoride."***

Lt. Col. Rhodes, Manhattan Project  
secret 1945 memo to General Groves.

---

Much of the proof of fluoride's [alleged] safety in low doses rests on the postwar work performed by the **University of Rochester**, in anticipation of lawsuits against the bomb program for human injury.

### **Fluoride and the Cold War**

Following the New Jersey industrial pollution incident at a du Pont factory producing fluoride for the top-secret Manhattan Project, the bomb program urgently directed the **University of Rochester** to conduct studies on the biological toxicity of the chemical.

Delegating fluoride safety studies to the **University of Rochester** was not surprising. During WW2 the federal government had become involved, for the first time, in large scale funding of scientific research at government-owned labs

and private colleges. Those early spending priorities were shaped by the nation's often-secret military needs.

The prestigious upstate New York college, in particular, had housed a key wartime division of the Manhattan Project, studying the health effects of the new "special materials", such as plutonium, beryllium and fluoride, being used to make the atomic bomb. That work continued after the war, with millions of dollars flowing from the Manhattan Project and its successor organizations, the Atomic Energy Commission (AEC). (Indeed, the bomb left an indelible imprint on all of U.S. science in the late 1940's and 50's. Up to 90% of all federal funds for university research came from either the Defense Department or the AEC in this period, according to Noam Chomsky's 1996 book "The Cold War and the University.")

The University of Rochester medical school became a revolving door for senior bomb program scientists. Postwar faculty included Stafford Warren, the top medical officer of the Manhattan Project, and Harold Hodge, chief of fluoride research for the bomb program.

### **Conflict of Interest**

But this marriage of military secrecy and medical science bore deformed offspring. The **University of Rochester's** classified fluoride studies - code named Program F - took place at its Atomic Energy Project (AEP), a top-secret facility funded by the AEC and housed in Strong Memorial Hospital. It was there that one of the most notorious human radiation experiments of the Cold War took place in which unsuspecting hospital patients were injected with toxic doses of radioactive plutonium. Revelation of this experiment in a Pulitzer prize-winning account by Eileen Wellsome led to a 1995 U.S. Presidential investigation, and a multi-million dollar cash settlement for victims.

---

***... one of the most notorious human radiation experiments in the Cold War ... unsuspecting hospital patients were injected with toxic doses of radioactive plutonium.***

Eileen Wellsome's Pulitzer Prize-winning account.

---

### **Program F was not about children's teeth.**

It grew directly out of litigation against the bomb program and its main purpose was to furnish scientific ammunition which the government and its nuclear contractors could use to defeat lawsuits for human injury. Program F's director was none other than Harold C. Hodge, who had led the Manhattan Project investigation of alleged human injury in the New Jersey fluoride-pollution incident.

---

***Programme F grew directly out of litigation against the bomb programme.***

Program F's purpose is spelled out in a classified 1948 report. It reads: ***"To supply evidence useful in the litigation arising from an alleged loss of a fruit crop several years ago, a number of problems have been opened. Since excessive blood fluoride levels were reported in human residents of the same area, our principal effort has been devoted to describing the relationship of blood fluorides to toxic effects."***

The litigation referred to, of course, and the claims of

human injury were against the bomb program and its contractors. Thus the purpose of Program F was to obtain evidence useful in litigation against the bomb program. The research was being conducted by the defendants.

**The potential conflict of interest is clear. If lower dose ranges were found hazardous by Program F, it might have opened the bomb program and its contractors to lawsuits for injury to human health, as well as public outcry.**

Comments lawyer Kittrell: *“this and other documents indicate that the University of Rochester’s fluoride research grew out of the New Jersey lawsuits and was performed in anticipation of lawsuits against the bomb program for human injury. Studies undertaken for litigation purposes by the defendants would not be considered scientifically acceptable today,”* adds Kittrell, *“because of their inherent bias to prove the chemical safe.”*

Unfortunately, much of the proof of fluoride’s safety rests on the work performed by Program F Scientists at the **University of Rochester**. During the postwar period that university emerged as the leading academic centre for establishing the safety of fluoride, as well as its effectiveness in reducing tooth decay, according to Dental School spokesperson William H. Bowen, MD. **The key figure in this research, Bowen said, was Harold C. Hodge - who also became a leading national proponent of fluoridating public water supplies.**

---

***“... the University of Rochester’s fluoride research ... was performed in anticipation of lawsuits against the bomb program for human injury.”***

Jacqueline Littwell, public interest lawyer.

---

**Program F’s interest in water fluoridation was directly connected to their work for the Manhattan Project. The bomb program needed human studies, as they had needed human studies for plutonium, and adding fluoride to public water supplies provided one opportunity.**

### **The A Bomb Program and Water Fluoridation.**

Program F needed human studies, and water fluoridation provided one opportunity. **Bomb-program scientists played a prominent - if unpublicised - role in the nation’s first-planned water fluoridation experiment, in Newburgh, New York.** The Newburgh Demonstration Project is considered the most extensive study of the health effects of fluoridation, supplying much of the evidence that low doses are safe for children’s bones, and good for their teeth.

Planning began in 1943 with the appointment of a special NY State Health Department committee to study the advisability of adding fluoride to Newburgh’s drinking water. The chairman of the committee was **Dr. Hodge**, then chief of fluoride toxicity studies for the Manhattan Project. Subsequent members included Henry L. Barnett, a captain in the Project’s Medical section, and John W. Fertig, in 1944 with the office of Scientific Research and Development, the super secret Pentagon group which sired the Manhattan Project. Their military affiliations were kept secret: **Hodge** was described as a pharmacologist, Barnett as a pediatrician. **Placed in charge of the Newburgh project was David B Ast**, chief dental officer of the State Health Department. Ast had participated in a key secret wartime conference on fluoride held by the Manhattan Project, and later worked with **Dr Hodge** on the Project’s investigation of human injury in the New Jersey incident, according to a once secret memo.

The committee recommended that Newburgh be fluoridated. It also selected the types of medical studies to be done, and “provided expert guidance” for the duration of the experiment. The key question to be answered was: “Are there any cumulative effects - beneficial or otherwise, on tissues and organs other than the teeth - of long-continued ingestion of such small concentrations ...?” According to the declassified documents, this was also key information sought by the bomb program, which would require long-continued exposure of workers and communities to fluoride throughout the Cold War.

**In May 1945, Newburgh’s water was fluoridated, and over the next ten years its residents were studied by the State Health Department. In tandem, Program F conducted its own secret studies, focusing on the amounts of fluoride Newburgh citizens retained in their blood and tissues - key information sought by the bomb program: “Possible toxic effects of fluoride were in the forefront of consideration,” the advisory committee stated. Health Department personnel cooperated, shipping blood and placenta samples to the Program F team at the University of Rochester. The samples were collected by Dr David B. Overton, the Department’s chief of pediatric studies at Newburgh.**

The final report of the Newburgh Demonstration Project, published in 1956 in the Journal of the American Dental Association, concluded that “small concentrations” of fluoride were safe for U.S. citizens. The scientific proof - “based on work performed ... **at the University of Rochester Atomic Energy Project**” - was delivered by **Dr. Hodge**.

**Today, news that scientists from the atomic bomb program secretly shaped and guided the Newburgh fluoridation experiment, and studied the citizen’s blood and tissue samples, is greeted with incredulity.**

“I’m shocked beyond words,” said present-day Newburgh Mayor Audrey Carey, commenting on the reporters findings. “It reminds me of the Tuskegee experiment that was done on syphilis patients down in Alabama.”

---

***... key information sought by the bomb program, which would require long-continued exposure of workers and communities to fluoride throughout the Cold War.***

Declassified documents

---

Today, contacted by the reporters, the director of the Newburgh experiment **David B. Ast**, now 95, says he was unaware Manhattan Project scientists were involved. “If I had known, I would have been certainly investigating why, and what the connection was,” he said. Did he know that blood and placenta samples from Newburgh were being sent to bomb program researchers at the **University of Rochester**? “I was not aware of it,” Ast replied. Did he recall participating in the Manhattan Project’s secret wartime conference on fluoride in January 1944, or going to New Jersey with **Dr. Hodge** to investigate human injury in the du Pont cases as secret memos state? He told the reporters he had no recollection of these events.

A spokesperson for the University of **Rochester Medical Center**, Bob Loeb, confirmed that blood and tissue samples from Newburgh had been tested by the University’s **Dr. Hodge**. On the ethics of secretly studying U.S. citizens to obtain information useful in litigation against the A-bomb program, he said, “that’s a question we cannot answer”. He referred inquiries to the U.S. Department of Energy, successor

to the Atomic Energy Commission.

A spokesperson for the Department of Energy in Washington, Jayne Brady, confirmed that a review of DOE files indicated that a "significant reason" for fluorine experiments conducted at the **University of Rochester** after the war was "impending litigation between the du Pont company and residents of New Jersey areas." However, she added, "DOE has found no documents to indicate that fluoride research was done to protect the Manhattan Project or its contractors from lawsuits."

On Manhattan Project involvement in Newburgh, the spokesperson stated, "Nothing that we have suggest that the DOE or predecessor agencies - especially the Manhattan Project authorised fluoride experiments to be performed on children in the 1940's."

When told that the reporters had several documents that directly tied the Manhattan Project's successor agency at the **University of Rochester**, the AEP, to the Newburgh experiment, the DOE spokesperson later conceded her study was confined to "the available universe" of documents. Two days later spokesperson Jayne Brady faxed a statement for clarification, "My search only involved the documents that we collected as part of our human radiation experiments project - fluorine/fluoride was not part of our research effort." **"Most significantly," the statement continued, "relevant documents may be in a classified collection at the DOE Oak Ridge National Laboratory, known as the Records Holding Task Group collection. "This collection consists entirely of classified documents removed from other files for the purpose of classified document accountability many years ago," and was "a rich source of documents for the human radiation experiments projects."**

## Health Findings - Newburgh and other Bomb-Program Fluoride Studies

The crucial question arising from the investigation is, were adverse health findings from Newburgh and other bomb-program fluoride studies suppressed?

All AEC funded studies had to be declassified before publication in civilian medical and dental journals. Where are the original classified versions?

---

***A "significant reason" for fluorine experiments ... after the war was "impending litigation between du Pont and residents of New Jersey areas."***

---

The transcript of one of the major secret scientific conferences of WW2 - on "fluoride metabolism" - is missing from the files of the U.S. National Archives. Participants in the conference included key figures who promoted the safety of fluoride and water fluoridation to the public after the war - **Harold Hodge** of the Manhattan Project, **David B. Ast** of the Newburgh Project, and U.S. Public Health Service dentist **H. Trendley Dean**, popularly known as the "father of fluoridation". "If it is missing from the files, it is probably still classified," National Archive librarians told the reporters.

**A 1944 WW2 Manhattan Project classified report on water fluoridation is missing from the files of the University of Rochester AEP, the U.S. National Archives, and the Nuclear Repository at the University of Tennessee, Knoxville. The next four numerically consecutive documents are also missing, while the remainder of the "MP-1500 series" is present. "Either those documents are still classified, or they've been "disappeared" by the government," says Clifford**

**Honnicker, Executive Director of the American Environmental Health Studies Project, in Knoxville, Tennessee, which provided key evidence in the public exposure and prosecution of U.S. human radiation experiments.**

Seven pages have been cut out of a 1947 **Rochester bomb-project notebook** entitled "Du Pont litigation". "Most unusual," commented chief medical school archivist Chris Hoolihan.

Similarly Freedom of Information Act (FOIA) requests by these authors over a year ago with the DOE for hundreds of classified fluoride reports have failed to dislodge any. "We're behind," explained Amy Rothrock, chief FOIA officer at Oak Ridge National Laboratories.

**Was information suppressed? The reporters made what appears to be the first discovery of the original classified version of a fluoride safety study by bomb program scientists. A censored version of this study was later published in the August 1948 Journal of the American Dental Association. Comparison of the secret with the published version indicates that the U.S. AEC did censor damaging information on fluoride, to the point of tragicomedy.**

---

***The reporters made what appears to be the first discovery of the original classified version of a fluoride safety study by bomb program scientists.***

---

This was a study of the dental and physical health of workers in a factory producing fluoride for the A-bomb program, conducted by a team of dentists from the Manhattan Project.

- ***The secret version reports that most of the men had no teeth left. The published version reports only that the men had fewer cavities.***
- ***The secret version says the men had to wear rubber boots because the fluoride fumes disintegrated the nails in their shoes. The published version does not mention this.***
- ***The secret version says the fluoride may have acted similarly on the men's teeth, contributing to their toothlessness. The published version omits this statement.***
- ***The published version concludes that "the men were unusually healthy, judged from both a medical and dental point of view."***

**After comparing the secret and published versions of the censored study, toxicologist Phyllis Mullenix commented, "This makes me ashamed to be a scientist." Of other Cold War-era fluoride safety studies, she asks, "Were they all done like this?"**

---

## The Illegitimate Birth of Fluoridation

Fluoridation is now a proven progression of covert fluoride health problems arising from the U.S. Manhattan Project, when building the first Atomic Bomb 1940.

The Government had a rampant fear that one day the truth about fluoridation would destroy the reputations of not only Government officials in such important positions of responsibility and trust, but also the reputations, scientifically and indeed morally, of the original fluoridation promoters ... Since that Atomic Bomb production, these promoters literally lived off the "cover-up" of fluoride toxic effects on man, beasts, fish, trees and crops.

The source of wealth of fluoridation projects now

becomes obvious together with promoters' unlimited finance for fluoridation's heinous existence, based on a covert cover-up without medical or dental original supporting research.

### **FLUORIDATION IS COMPULSORY MASS MEDICATION BASED ON A GOVERNMENT'S 50 YEAR COVER-UP OF PROVEN FLUORIDE HEALTH PROBLEMS!**

Now the great "original" fluoridation heroes and their cohorts in strong political, medical and dental areas of public influence can be named for the communities knowledge and in the genuine "History of Fluoridation".

Of great interest will be the history of Australian Fluoridation Heroes and their scientific data of similar U.S. quality and honesty!

Industry depends on the debating of fluorides and Fluoridation, because it keeps researchers, organisations and promoters investing time in an endless well known, well financed shonky science, hoping they never realise INDUSTRY and all its connections are the power involved with fluoridation.

Fluoridation has nothing scientific in the field of dental decay, but it does its job by keeping people flummoxed with old fashioned sorcery - the old snake-oil sales propaganda, alive today with product names changed and modern spin-doctors keeping the people of the world from knowing the reality of fluoridation and environmental industrial fluoride pollution. - **Editor**

# HISTORY OF THE FLUORIDATION FURPHY

By Glen S.R. Walker

For over 40 years the fluoridation data printed in the **Australian Fluoridation News** (Aqua Pura) has been based on infinite honest data, and in all these years without a contradiction or challenge by the Fluoride Mafia and their fellow travellers, anywhere in the world.

We have invited and assured space in our **Australian Fluoridation News** for any official challenge.

On the contrary, the Fluoridation Conglomerate of Politicians, Health Departments, Doctors, Dentists and the bureaucracy in general, plus Universities carefully and consistently supported by the Media of Australia, is obviously a case of cover-up protection, rather than a science on a failed medical concept, never scientifically proven safe and effective in relation to the ubiquitous unsubstantiated exaggerated claims parroted ad nauseum.

Their 60 year propaganda has failed to happen and yet our politicians believe the myth. Their science is a kind of seven-day wonder on a finite inappropriate science and always changing their promises and guarantees of honest research.

## **No Fluoridation in Scientifically Advanced European Countries**

They have not impressed any of the scientifically advanced European countries who do not use fluoridation, and even the W.H.O. record the relatively good teeth of the population in these countries, superior to fluoridated areas.

That alone draws serious attention to questions demanding answers, but please none of the latest Australian dental propaganda that rather than water fluoridation, the myth that these advanced scientific countries put fluorides in table salt.

Fluoridation is the forerunner of population control through every home kitchen tap, drugging (controlling) the people 24 hours every day in their own homes, a process of evil manipulation not in the interest of the people and our Constitution.

How the international corporate drug companies press for the day when all drinking water throughout the world will be equipped with "dosing stations", an open sesame to introduce drug after drug into every home.

The cost will be a pittance compared with the enormous profit with large petty-cash available to promote these evil medical concepts.

The Prime Minister talks about terrorists, but seems

unable to foresee the terror of our drinking water supplies being the carrier of all kinds of chemical drugs which exactly like fluoride in water, the dose will not be controlled or indeed controllable.

The supreme sacrifices of young men and women in past wars to protect us from dictators carry a sacred obligation that we must all perform.

Truth in Government, truth in action and a respect for the inalienable rights of the individual are the basis of our Constitution.

## **The Origin of Furphys**

At the present time Australians are being bombarded with so many Furphy claims about fluoridation, we thought the origin of the Furphy Story should be documented.

**Furphy is a word coined in World War 1 and today is used to describe fluoridation propaganda, "A Furphy".**

Soldiers would gather around the "Furphy" Water Carts bringing them water on the battle front.

They would tell stories on many subjects with many an exaggeration of fact which created the word, "a furphy".

The Furphy water carts were made by Joseph Furphy in their family factory at Shepparton, Victoria.

However, having stated the above, every Furphy water cart carried a message cast in iron on the end of each tank (cart).

It carries a message of general importance, especially those promoting false data.

Cast in iron:

*"Good, better, best. never let it rest, Till your good is better and your better is best."*

These Furphy Water Carts are still seen in some Australian farms after their use in World War 1, and the same message on each cast iron end.

Next time you hear a fluoridation furphy, you will understand its meaning.
