Fluoride Spill - Injuries and Death

Police in Ontario Canada activate “mass casualty response”

A 30 vehicle collision in Ontario involving a tanker containing fluorosilicic acid has claimed the life of the truck driver and put 28 others into hospital on the afternoon of 14 March 2017.

The weather-related collisions on Highway 401 involved multiple chain reaction crashes.

The driver carrying the toxic liquid was required to be extricated after the truck ended up in a ditch. It was estimated the tanker was carrying between 7,000 and 10,000 litres, most of which leaked onto the highway. The 45 year old driver died later in hospital.

None of the first responders were wearing hazmat suits and did not know what they were dealing with. A HAZMAT team was called to the site. According to the newspaper KingstonRegion.com (14 Mar 2017):

“The incident was labelled a “mass casualty event” due to the high number of people exposed to a hazardous material, fluorosilicic acid, which leaked from one of the tractor trailers involved.

“Kingston General Hospital declared a code orange that afternoon due to the influx of patients coming in from the crash, and reported that it treated 29 patients in total as a result of the accident – 13 of whom were emergency services first responders including firefighters, police officers and paramedics. All of these patients were treated in a decontamination bay set up for the occasion and were held for observation as a precaution.”

Fluorosilicic acid is waste chemical collected typically at phosphate fertiliser factories and is one of the forms of “fluoride” used in artificial water fluoridation. Once diluted, authorities claim, it is “safe and effective” for preventing tooth decay, but after more than 70 years very few countries fluoridate their populations and an increasing volume of the latest science shows it is ineffective. There is a long list of

Reprinted from National Fluoridation News

health consequences of using any toxic fluoride substance at any concentration.

KingstonRegion.com (14 Mar 2017) describes some of the acute effects:

“Exposure to the fluorosilicic acid could cause irritation to the nose, throat and respiratory system; redness or swelling of the skin; and severe eye irritation. Fluorosilicic acid turns into hydrofluoric acid if exposed to heat,

Brief News: Vale Mary Walker; Google & Facebook Censorship	4

according to the Leeds Fire Department. Hydrofluoric acid is a highly toxic, highly corrosive and poisonous solution which is harmful to skin, lungs and eyes."

Another report in LandLineMag.com (14 March 2017) stated:

"The police service post notes that emergency responders are requesting anyone in the area to remain in their vehicles and await further instructions and evacuation by first responders..."

" 'We reiterate the need for people to remain in their cars until otherwise advised,' the release stated, and encouraged residents and travelers to stay home or use alternate travel routes."

As an indication of increasing awareness of fluoridation issues, reader's comments on KingstonRegion.com (15 March) included:

"Many innocent people who have been acutely exposed to fluoridation chemical spill will later go on to develop long term disability and other health problems without a clue. Just like the segments of the population unusually susceptible to the toxic effects of water fluoridation. People with deficiencies of calcium, magnesium, &/or vitamin C, and people with cardiovascular and kidney problems. These people are simply ignored by Ontario's Health Minister, Dr. Eric Hoskins who should at least understand the science let alone the ethics of his profession. He had better stop this practice, not only will this improve the health of many Ontarians but will stop the transport of this toxin on our highways. Next time it might be in his or your city!"

Another reader commented:

"The chemical spilled, fluorosilicic acid, is the fluoridation chemical added to the drinking water of some cities and

towns to ostensibly prevent dental cavities. According to new studies and thousands of scientists, toxicologists, doctors, and dentists, fluoride is cumulative in the body causing many health problems. It has been banned in 97% of European Countries and many Canadian cities. This contentious, protected government practice should be stopped for the sake of our health and the environment."

The readers' comments were later removed from the newspaper's webpage.

Conclusion

Fluorosilicic Acid, the carcinogenic schedule 7 poison being transported in a tanker truck is nearly as dangerous on our roads as it is in our water supply.

The active ingredient in fluorosilicic acid that poisons enzymes and kills life is the element fluoride. When it spills on the highway it kills and causes injury. If the fluoride truck had reached its destination, the fluoride would have contributed to increasing the fluoride body burden and ensuing illness, while shortening the lives of people who believed it was good for their teeth. The day is coming when enough people are asking enough questions to have this fluoride waste disposal scheme ended. Let's do what we can to speed that up.

Fluorosilicic Acid - The Toxic Additive in Our Drinking Water

Fluoride, the world's worst air pollutant, becomes the dental profession's Holy Grail

The billions of dollars of claims for damage caused by fluoride air pollution to livestock, fruit, vegetable crops and human health has exceeded claims for all other air pollutants combined. The need for fluoride, as a critical chemical for building the first atomic bomb for the secret Manhattan Project site in western Florida, also produce human victims of fluoride air pollutants, with *"multiple deaths and damage to workers health kept secret for 50 years"*. General R. L. Groves of the US Army Corps of Engineers was in charge of the massive project, and was responsible for fluoride deaths.

Dr. Kehoe, Director of the Kettering Laboratory of Applied Psychology at Cincinnati University, with advice from corporate attorneys, led the major fluoride-producing corporations legal challenges against lawsuits for industrial fluoride pollution.

"Dr. Harold Hodge was the senior toxicologist for the Manhattan Project. In that role he *"helped choreograph the notorious human radiation experiments in which hospital patients were injected with plutonium and uranium – without their knowledge or consent – in order to study the toxicity of those chemicals in humans."*

His responsibilities also included studying fluoride toxicity.

Later, he covertly monitored one of America's first public water fluoridation experiments at Newburgh, New York,

blood and tissue samples from citizens being sent to his atomic laboratory for study. *"He trained a generation of dental school deans in the 1950s and 1960s, having previously, together with Dr. Robert Kehoe, promoted water fluoridation in the 1940s and 1950s"*.

When fluoride is in water supplies at one tenth the concentration of 1 part per million added artificially to water supplies, mild mottling of teeth still occurs in a small proportion of children.

***"No matter how mild the mottling is, it is an 'external sign of internal distress' according to the scientist H. V. Smith, one of the researchers who in the 1930s discovered fluoride was mottling teeth"*.**

"The AMA and the ADA had editorialized against fluoridation in the early 1940s. In 1944 the Journal of the

American Dental Association *had editorialized*, 'Our knowledge of the subject certainly does not warrant the introduction of fluorine in community water supplies.'

"Our knowledge of the subject certainly does not warrant the introduction of fluorine in community water supplies".

- US ADA and US AMA, circa 1940s

Kaj Roholm, who first revealed the devastating effects of fluoride air pollution in the Donora death fogs and the world's leading fluoride authority, opposed giving fluoride to children.

As Christopher Bryson revealed in his extensively researched book *The Fluoride Deception*, the final solution to the problem of fluoride pollution and health damage, was for fluoride to be labelled *"the dental wonder chemical"*. Hodge and Groves, together with industries which used or produced fluoride including the U.S. military, helped to create and polish fluoride's public image as a safe chemical to prevent dental decay".

Although it is impossible to control human fluoride intake when in drinking water, being totally related to the volume consumed, *"fluoride promoters had a simple solution."* *"Mottled teeth were described as a 'cosmetic' issue, not a health problem."* *"Most importantly, promoters vigorously denied that any injury to bones or organs could ever be produced from drinking water fluoridated at 1 part per million"*.

"Mottled teeth [from damage caused by fluoridated water] were described as a 'cosmetic' issue, not a health problem."

Master propagandist, American Edward Bernays, self-styled father of public relations, assisted in successfully promoting fluoridation of water supplies when a consultant to the National Institute of Dental Research. His clients also include Alcoa, U.S. Military, and major tobacco companies, where he was responsible for persuading American women to smoke cigarettes.

Dr Hodge *"produced two key studies for the National Research Council and American Association for the Advancement of Science in 1953 and 1954, stating 'Present knowledge fails to indicate any health hazard associated with the extra deposit of fluoride in the skeleton that will undoubtedly accompany water fluoridation'."* But, *"in an obscure paper published in 1979, Hodge quietly admitted that his safety figures had been wrong"*.

Florida, with huge reserves of natural phosphate, the raw material for phosphate fertilizer, supplied fluorosilicic acid to many water authorities in the U. S., the waste fluoride product being scrubbed from phosphate fertilizer plants to reduce that air pollutant's damage to crops and livestock, particularly when down-wind. In some instances, fluoride air pollutants have been recorded one hundred kilometers from fertilizer plants.

"In 1983 the EPA's Rebecca Hanmer acknowledged that fluoridated water with phosphate-industry waste was a fix for Florida's environmental pollution." The vast majority of the acid finishes up in waterways and the ocean, but that was apparently of no concern to her.

Fluoridated water with phosphate-industry waste was a fix for Florida's environmental pollution. - Rebecca Hanmer, US Environmental Protection Agency

'The Agency regards such use as an ideal environmental solution to a long-standing problem. By recovering by-product fluorosilicic acid from fertilizer manufacturing, water and air pollution are minimized, and water utilities have a low-cost source of fluoride available to them'.

In the US, over 200 communities stopped fluoridation after a court trial. In Australia, dozens of communities have soundly rejected fluoridation proposals, but in an affront to democracy, governments have legislated for mandatory fluoridation in most cities and towns.

Acknowledgements and References

Anyone with a conscience about the welfare of his fellow man should not only be extremely grateful to Christopher Bryson and his research team in uncovering the secret link between development of the first atomic bomb and fluoridation of water supplies, but also disturbed and appalled that top officials and scientists apparently had no concern for either the welfare of their own workers, nor future damage to the health of millions of citizens throughout the world, including in Australia, when they knew the inevitable consequences of their obsession with this volatile enzyme poison.

Dr. George L. Waldbott: and his books, including *Fluoridation the Great Dilemma*.

Dr. F. B. Exner: *Fluoridation, Its Moral and Political Aspects, A New and Comprehensive Study*. His analysis of Public Dental Services dental fluorosis data in children's teeth showed beyond doubt that even minute traces of fluoride in water where it sometimes occurred naturally inevitably resulted in dental fluorosis in a proportion of teeth.

Even Captain America has fluorosis

Actor Chris Evans, who plays Captain America, has dental fluorosis.

His father Dr G Robert Evans is a dentist and gave fluoride drops, tablets and gels to his kids including his son Chris. Only when Chris' permanent teeth erupted and had brown and white spots, did his dentist dad begin researching fluoride. Dr Evans no longer uses fluoride in his practice. And he's now a staunch opponent of water fluoridation.

Will Captain America pick up his shield and go after the industrial sector (and their buddies in the government "health" bureaucracies) disposing of hazardous industrial fluoride wastes through the tap water?

WA Fluoride Free Party contests 2017 state election

In what may be a world first, the newly-created Fluoride Free Western Australia Party has contested its first election. We're unaware of a similar fluoride free party running in an election before.

On March 11, twelve candidates stood for the Western Australian Legislative Council (upper house), particularly in regions affected or threatened by fluoridation, but did not win any seats.

The existence of the party highlights that fluoridation is a political issue that won't go away until fluoridation is removed, and the issue will continue to bite politicians who wish to mass medicate.

Up to 1.6 million voters saw the words 'fluoride free' on their ballot papers, impressing that fluoridation is still an issue, despite Perth being fluoridated since 1968.

The WA Health Minister John Day (Liberal), a former dentist (pro-fluoride) lost his seat in the election. The incoming Health Minister Roger Cook (Labor) is also pro-fluoride. To date, health ministers in fluoridated areas have avoided questioning the claimed benefits, costs and ethics of artificial fluoridation.

In the lead up to the election, Professor Paul Connett gave talks in Kununurra, Yanchep, Perth and Margaret River.

The low election result is a reflection of the number of factors including that the FFWA party is only new and is on a learning curve; that it is a single issue party, so it was unclear how an elected member might represent the electorate on issues other than fluoridation; and also a preference deal amongst smaller parties that saw only the largest of those small parties in the agreement win any seats. In retrospect, not such a good deal.

Fluoridation and Politics

Most countries do not fluoridate their populations. Fluoridation promoters for years have tried to convince populations in a small number of mostly English speaking countries that there is no controversy and no debate.

But when given the chance to debate, the vast majority of fluoridation promoters worldwide refuse to do so.

The WA Fluoride Free Party draws attention to fluoridation's many issues, including that fluoridation usually only occurs in areas where 'leaders' force the policy on unsuspecting citizens.

The big political parties in Australia have been a cog in the fluoridation mechanism since the 1950s, allowing

fluoridation in and maintaining it in areas whose populace would not vote for it if fully informed and given the opportunity to choose.

Both Liberal and Labor parties support artificial water fluoridation. Federally, the Greens, led by a former medical doctor trained in pharmaceuticals, also think the disposal of industrial fluoride wastes through the kitchen tap is an acceptable policy, though not all Greens agree with this.

Politics alone won't remove fluoridation and we must also look to the steady stream of scientific research showing fluoridation's harms and also importantly the increasing organic grassroots support from those active and knowledgeable. Eventually everyone will know that industrial waste fluoride is as beneficial as arsenic or mercury.

The fluorosilicic acid (or its salt, sodium fluorosilicate) that is used for water fluoridation is unrefined industrial waste, mainly from phosphate fertiliser factory emissions. Because it is unrefined, it often also contains arsenic.

It's great at last to have a political party shining light on the discredited, dangerous and absurd practice of artificial water fluoridation.

Fluoridation 30 second TV Commercials

A series of 30 second television fluoridation advertisements have been created for NZ television, activating people to question the practice, possibly for the first time. Created and funded by New Zealanders, these commercials are straightforward and promote critical thinking, even to the point of cognitive dissonance. We've been told for so long that fluoridation is "safe and effective" that when the opposite is suggested, it can be quite a shock. Some people will then investigate the issue while others are unable or unwilling to process the contradiction and bury it for the time being, until the matter comes up again.

The WA Fluoride Free Party campaign added new voiceovers to the NZ advertising campaign and is also worth sharing. Both series of commercials are available on YouTube:

Countries: www.youtube.com/watch?v=pqfaR42kyas

Hazardous Waste: www.youtube.com/watch?v=mD_talztaRg

Brief News

Vale Mary Walker

Mary Walker, fluoridation campaigner since the 1960s, and wife of the late Glen Walker, has passed away aged 92. We will publish a tribute in a forthcoming edition.

Google and Facebook censor Natural News

NaturalNews.com is now being censored so that it doesn't show up in searches or sharing of stories. InfoWars is also being targeted. This looks like bullying for not complying with the official establishment "fakestream" media narratives on certain issues. We suggest ditching Google and trying other search engines like DuckDuckGo, GoodGopher.com or StartPage.com.
